Setup New IPAK5

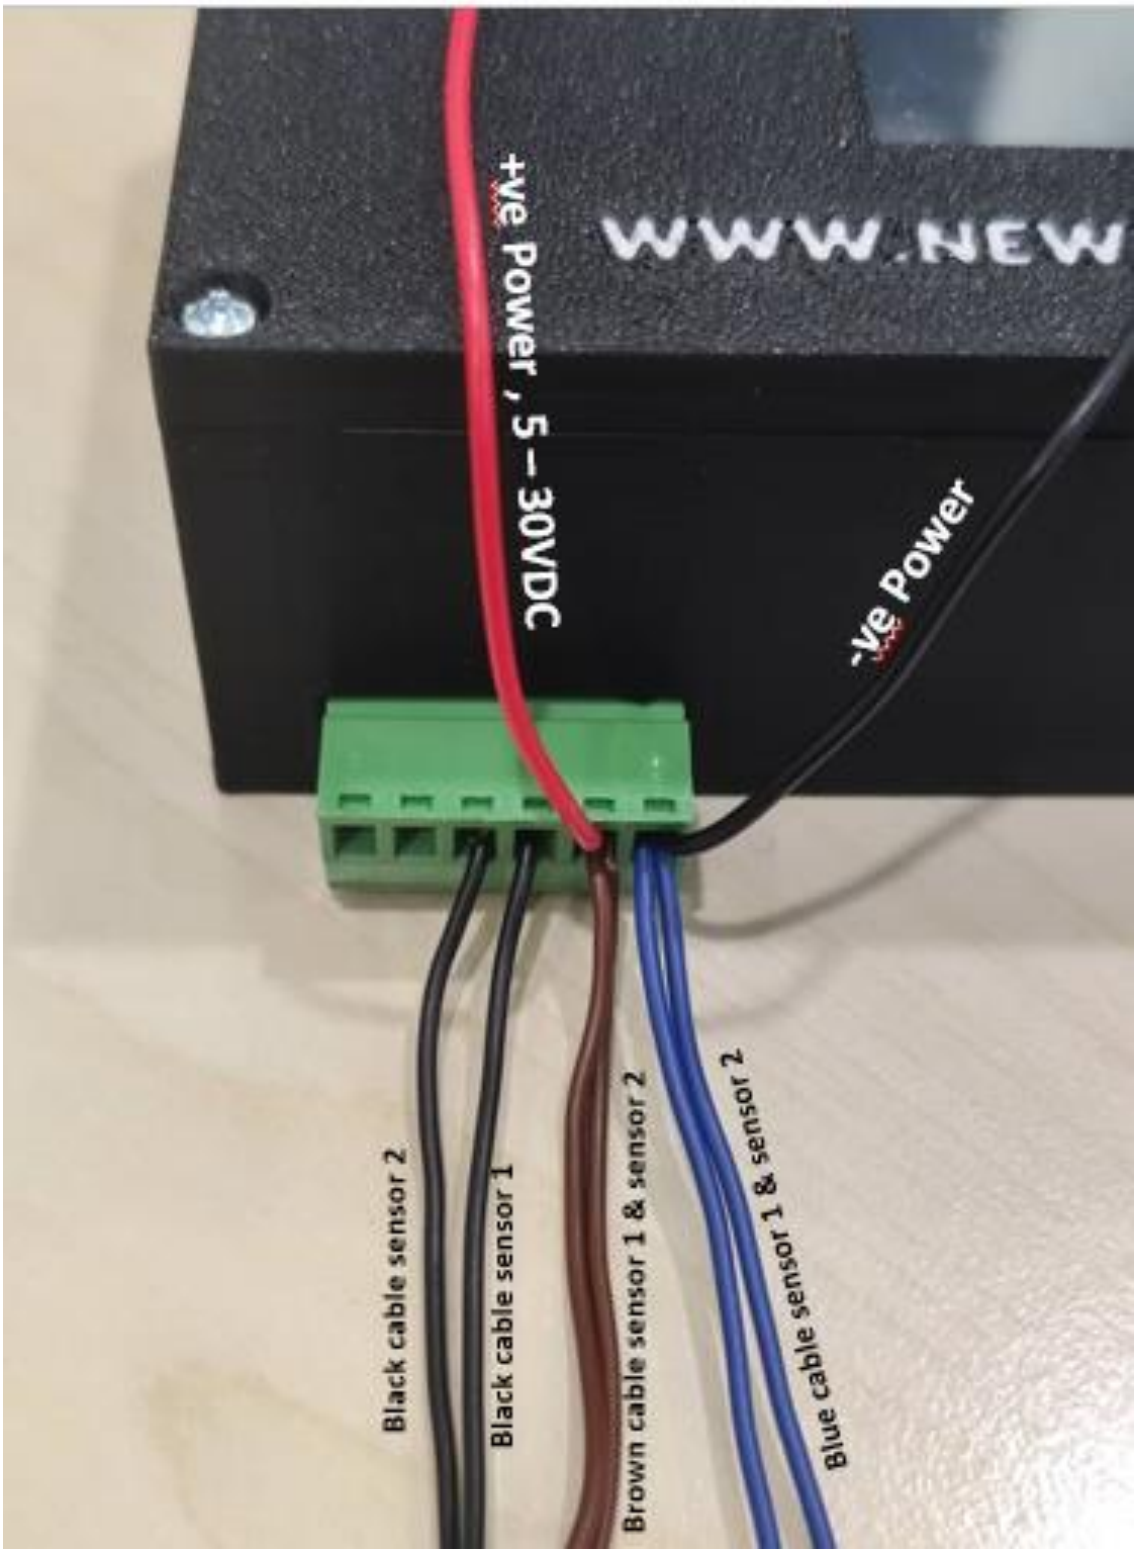

Tools needed for installation

1. Two cables or two core wire for 24VDC power supply
2. A electrical test pen
3. A multimeter
4. Metal bracket with 12.5mm holes diameter for sensors
5. Tools (Screw, nuts, metal glue, screw driver / L length key) for metal bracket installation
6. Keyboard and Mouse

1. Wiring Connection

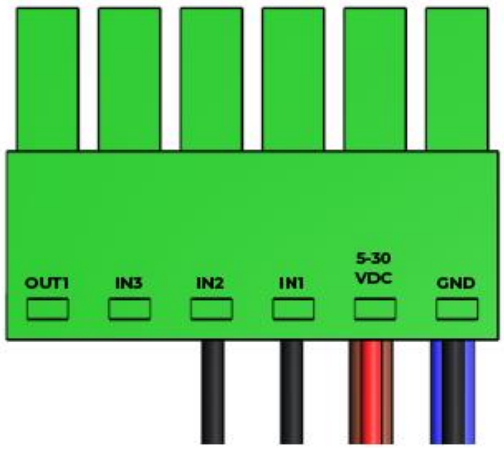

From the left to right	Details		Cable to slot in
Slot 1	OUT1	Signal Out	-
Slot 2	IN3	Sensor 3	-
Slot 3	IN2	Sensor 2	1)Black cable sensor 2
Slot 4	IN1	Sensor 1	1)Black cable sensor 1
Slot 5	5 – 30VDC	+ve Power	1)+ve power supply 2) Brown cable sensor 1 3) Brown cable sensor 2
Slot 6	GND	-ve Power	1) –ve power supply 2) Blue cable sensor 1 3) Blue cable Sensor 2

Wiring Diagram

1. **Wiring Connection**

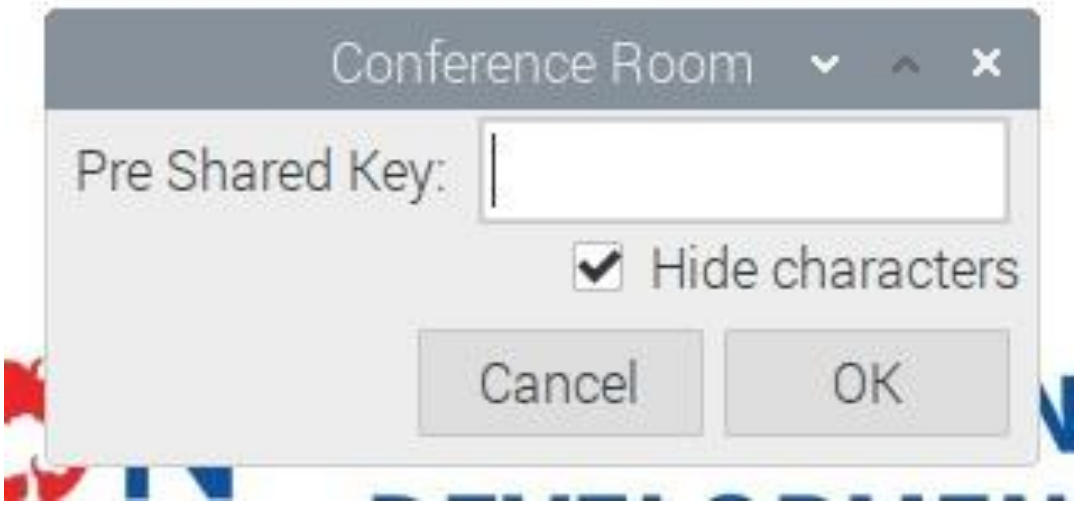

OUT1	Signal Out	-
IN3	Sensor 3	-
IN2	Sensor 2	1)Black cable sensor 2
IN1	Sensor 1	1)Black cable sensor 1
5 – 30VDC	+ve Power	1)+ve power supply 2) Brown cable sensor 1 3) Brown cable sensor 2
GND	-ve Power	1) –ve power supply 2) Blue cable sensor 1 3) Blue cable Sensor 2

2. **Getting Start**
   a) Power up device from any power source (5 – 30 VDC)
   b) Waiting until device show main display.
   c) Connect keyboard and mouse to USB port of IPAK5
   d) Link Wi-Fi for internet access:
   e) If the device not on the main display, you may drag the windows from left to right (from the end of the screen on the left to right.)

RESEARCH AND DEVELOPMENT CENTRE

f) After WiFi is connected, Reboot device.

3. **Test Run**
   a) Power up device.
   b) Wait until main program display.
   c) Test sensor 1 and sensor 2 with a metal object

   Without metal object

   With metal object

   d) Start wrapping for program start and sent to cloud.
